Ultraviolet (UV) curing is a photochemical process in which high intensity UV is used to instantly cure inks, coatings or adhesives in a wide range of industries. Offering many advantages over traditional drying methods, UV curing has been shown to increase production speed, reduce reject rates, improve scratch and solvent resistance, and facilitate superior bonding.

Heraeus Noblelight’s microwave-powered lamps are used in hundreds of industrial ultraviolet curing applications from automotive headlamps to flooring to medical devices to wire marking and electronic components.

Our customers have come to count on the quality of cure from Heraeus Noblelight’s products – day-to-day, month-to-month and through thousands of hours of use. Our high-energy lamp systems generate a reliable and consistent source of UV energy. And when placing lamp systems side by side for extended widths, there is no loss of energy or need for overlap.

From the economical F300, to the ultra high output 10-inch Light Hammer 10 MARK II lamp system, Heraeus Noblelight offers a wide range of products so that you can choose the right system for your process.

1. Not available with “electronic shutter”  
2. Depending on Duty Cycle and Power Level  
3. Not for Cycling operation  
4. Only available with specific configurations and markets  
5. Requires separate electrical power

### Accessories
- Special fill bulbs available – matches the lamp spectrum to the process
- 8,000-hour warranty (non-prorated) on H bulbs; 6,000-hour warranty (non-prorated) on special fill bulbs
- Light shields, standard and custom for webs, sheets and 3D parts
- Conveyors
- Wide line system to 6 m (20 feet) and more
- Custom design and engineering
- Cabinet enclosures for multiple power supplies
- Turnkey system capability
- Variable power output option

Unsurpassed power and reliability are the result of Heraeus Noblelight’s continued commitment to develop improved ultraviolet curing solutions that meet our customers’ demands for higher production speeds, better process control, and lower cost of ownership.
UV Processing Systems

Web Systems

- 15 cm (6 in.) to 6 m (20 ft.) wide
- Nitrogen inerted to 30 ppm O₂ available
- Purged and pressurized available for hazardous locations
- Full integration with process controls
- On-line monitoring available

Sheet Handling and Part Handling Systems

- Conveyor widths 5 cm (2 in.) to 3 m (10 ft.) wide
- Conveyor speeds to 900 m/min. (3,000 fpm)
- Belts of Teflon®-coated Kevlar®, nomex (anti-static) or stainless steel
- Water-cooled beds, cold reflectors available
- Nitrogen inerting available

Benchtop Conveyor Systems

- Ideal curing system for small parts
- Lamp can be rotated or raised and lowered
- Belt speeds of 0.6 to 76 m/min. (2 to 250 fpm)
- Ideal for laboratory and R&D applications
- Rugged enough for pilot plant or production environments

Wide-line Systems

- Widths unlimited
- 8-meter wide systems in production
- Excellent uniformity across entire product width
- Low heat output for thermally sensitive products
- Nitrogen-inerted systems available

Wire, Cable and Fiber Systems

- 360° reflector systems for maximum efficiency
- High intensity, well-defined “sweet spot” for maximum product speed
- Nitrogen inerted systems available
- Special reflector patented for optical fiber production

Special Product Handling Systems

- Static exposure chambers
- 3D parts curing
- Rotational or non-rotational cure
- Robotic parts handling

Output Spectra of Typical Heraeus Noblelight Electrodeless Bulbs
Curing of coatings, inks, paints and adhesives with UV (ultraviolet) is considered a “green” technology. It provides a healthier environment to workers and offers several advantages over solvent-based technologies including a reduction in VOCs (volatile organic compounds), air pollutants and flammability.
